

Education

Financial University under the Government of the Russian Federation

Banking and Financial Markets

Bachelor's Degree

2015 – 2019

Financial Analysis and Investment Decision Evaluation

Master's Degree - GPA: 3,95/4 (*with honors*)

2019 – 2021

Certificate

Microsoft certified: Power BI Data Analyst Associate

Courses

Udemy:

- Apache Airflow: The Hands-On Guide
- Data Engineering on Microsoft Azure: The Definitive Guide
- The Complete Apache Kafka Practical Guide
- Taming Big Data with Apache Spark 4 and Python - Hands On!

Stepik:

- Introduction to Databases
- Immersion in DBMS. 2017 Season
- Python Programming
- Fundamentals of Statistics

Sqlbi:

- Mastering DAX
- Introduction to data modeling for Power BI, etc.

Work Experience

03.2023 – Present
Remote, California

B9, Inc (Fintech, 1M+ registered users)

BI / Data Engineer

- Responsible for maintaining and improving most of the data marts and reports.
- Wrote numerous scripts for batch loading data into the DWH (pandas, sqlalchemy). Including loading a large volume of data from the SendGrid service (6-10 million rows daily) into the Data Lake with further processing in the DWH.
- Developed numerous functions for streaming processing of webhooks from a message broker with subsequent loading into DWH/sending notifications to the client (Azure Function, Service Bus, Asyncio). This included responding to webhooks for bank transactions and customer events in the application.
- Wrote scripts for monitoring and fraud detection: real-time detection of fraudulent transactions and card blocking.
- Migrated 50+ ELT processes to Airflow.
- Created DAGs and migrated report updates from jobs to Airflow, which allowed for convenient monitoring of the report update schedule. It also allowed for identifying slow procedures and refactoring them. Retry and timeout mechanisms allowed for timely updating of outdated reports, which significantly increased the satisfaction of product teams with report handling.
- Query optimization: for example, using a regression query analysis tool, I found a regressing query, analyzed the query plan, and rewrote it, reducing processing time from 1.5+ hours to 9 minutes.
- Rewrote SMS sending to clients using asynchronous code, reducing sending speed from several hours to 40 minutes.
- Conducting A/B tests to identify effective communications.
- Worked with APIs (Google Ads, Appsflyer, Sendgrid, Twilio, etc.)
- Interacting with business users of reports, understanding their needs, and creating data visualizations and reports in PowerBI based on this understanding to monitor company activities.

For example:

- In accordance with the requirements of the marketing department, I created reports to monitor the real lead funnel from lead partners, which allowed us to analyze high-quality lead partners, identify fraudulent leads in a timely manner, and pay only for real leads.
- In accordance with the requirements of the product department, I created reports to track metrics for key products – advances, credit lines (disbursements, repayments, delinquencies).

- Creation, maintenance, and monitoring of reports on reserves, P&L, application funnel, lead funnel, customer generation, transaction reports, tariffs, and customer communications.

Many management decisions are made based on these reports:

- The report allowed us to track poor repayment dynamics on credit lines, which allowed us to stop the pilot product in time.
- Based on the technical support activity report, bonuses are paid to the technical support team.
- The reports allowed us to make decisions on improving or mass implementing certain features (for example: after users were given the opportunity to manually enter the tip amount in the application, the report showed a significant increase in tip collection. The report showed a positive result of implementing gamification features in the application. Tracking the effectiveness of scoring based on data from new systems).
- Also, based on the communication report, decisions are made daily and new communications with users are created via email, SMS, and push notifications.

08.2022 – 03.2023
Remote, CIS

Fintech Project – BI / Data Engineer

- Participated in building the DWH from scratch. Under the guidance of the Head of Data, analyzed data and developed new entities for the DWH as part of ELT processes. Implemented data loading and transformation using Python (SQLAlchemy, Pandas) and SQL procedures (MERGE, CTE, cursors).
- Creating dashboards in Power BI to monitor the execution of scripts using DAX
- Preparing a report in Power BI Report Builder to enable the legal department to independently export data from the DWH
- Developing Data Quality scripts to automate data load quality checks in the DWH, based on row counts and value validation
- Data backup from the DWH to Parquet files, followed by uploading into an S3-based Data Lake, using PySpark, boto3 libraries etc
- Creating an Airflow DAG to automate ETL processes

04.2022 – 08.2022

Relocation to Vietnam

- Exporting data via the API from the OneSignal service
- Preparation and receipt of documents related to relocation

11.2020 – 04.2022
On-site, Moscow

Everest Consulting LLC

Consultant

04. 2021 – 04. 2022

- Valued companies using income and market approaches (coal, real estate, chemicals)
- Participated in impairment testing (38+ companies).

Associate consultant

11. 2020 – 04. 2021

- Built DCF models for mining, industrial, and TMT sectors.

11. 2017 – 02. 2018
On-site, Moscow

Coinplace.pro – Intern Analyst

- Networked with 15+ investors at event - Crypto Space Moscow.
- Found 3 potential advisors in Vietnam.
- Performed ad-hoc analytical tasks for ICO preparation.

Projects & Activities

Pet project – I developed a full-fledged service (Web/Mobile) to manage Rotating Savings and Credit Associations (ROSCA) groups, using LLMs (Gemini 2.5 pro, ChatGPT).

Link: https://github.com/DVLampe/hui_manager

- **Functionality:** Implemented group creation and management, tracking of contributions and payments, a dashboard with overall statistics, export of reports to Excel/PDF, and a chat for participants.
- **Technologies:** Used Next.js for the web application, Capacitor for creating the mobile version, Supabase for the database, and NextAuth.js for authentication.
- **Deployment:** Prepared the infrastructure for deployment on a VPS using Docker, NGINX, and CI/CD based on GitLab.

Posterum – a student project to create a crowdfunding platform for scientific projects.

- Prepared pitch presentation for hackathon “Blockchain Pioneers Hackathon 2020” (team won 2nd place)
- Built initial financial model.

Internship – assigned by the university to an internship at PJSC St. Petersburg Exchange.

- Participated in listing of 200+ issuers.

Competitions – Winner of “Financial University International Youth Olympiad,” 2018

- As a result of the olympiad, I was awarded a tuition-free place in a master's program.

Skills

Languages:

Russian — Native
Vietnamese — Advanced
English – upper-intermediate (IELTS 6.5)

Technical:

MS SQL, Power BI, Python, DAX, Azure (Azure Function, Service Bus, Key Vault, Blob Storage), S3, Airflow, Asyncio, Pandas, A/B tests, Kafka, Docker, PySpark, Git, Jira, Confluence.
